Assignment 1

Assignment: HTML Structure and Text Formatting

Objective: Create a single HTML file that accurately structures content using nested `div` elements and specific formatting tags.

1. The Structure

Your code must follow this specific nesting order:

1. A `<div>` with the class `container`.
2. Inside the container, a `<div>` with the class `row`.
3. Inside the row, a `<div>` with the class `column`.
4. **All** content below must be placed inside that single `column` div.

---

2. Content to Copy

Copy and paste the following text into your HTML file, then wrap it in the correct tags:

Heading: Web Development Fundamentals 101

Paragraph: HTML (HyperText Markup Language) is the backbone of the web. It provides the structural layer for all websites, allowing developers to organize text, images, and data efficiently.

Formatting Section:

- Text with strike: This old method is now deprecated.
- Superscript: The area of a square is calculated as side squared (s^2).
- Subscript: The molecular formula for glucose is $C_6H_{12}O_6$.

Nested List:

- Web Technologies
    - Front-end (HTML, CSS, JS)
    - Back-end (Node.js, Python)

Ordered List (Roman Numerals):

1. Requirement Analysis
2. System Design
3. Coding Phase
4. Quality Assurance

Table Data:

- Row 1: Item # | Product Name | Price
- Row 2: 101 | Mechanical Keyboard | $85.00
- Row 3: 102 | Optical Mouse | $45.00
- Row 4: 103 | UltraWide Monitor | $320.00

Anchor tag:

- Go to Google!

Image:

- Display the image attached to this assignment below.

- Height = 100px and width = 100px

---

3. Technical Requirements Checklist

Ensure your final code meets all these criteria:

Feature	Requirement
Hierarchy	`container` > `row` > `column`

The anchor/link tag should take user to https://google.com. It should open a new Tab for it.
