

Assignment

Assignment: Research on Web Application Development Basics

Objective

The goal of this assignment is to help you understand the core concepts of web application development, including frontend, backend, databases, development tools, testing, and version control. You are expected to research the topics and explain them **in your own words**, based on your understanding.

Instructions

- Research each question carefully using class notes, books, or reliable online sources.
 - Write answers **in your own words**. Copy-paste answers will not be accepted.
 - Keep explanations clear and simple.
 - Wherever applicable, give real-world examples.
 - Submit the assignment as a **Word / PDF document**.
-

Questions

1. Frontend

- What do you understand by *frontend*?

- What is the **basic building block of frontend development**?

2. Backend

- What is *backend* in a web application?
- What are the main responsibilities of the backend?

3. Database

- What role does a database play in the backend?
- Why is a database important for modern applications?

4. IDEs (Integrated Development Environments)

- Find **five IDEs** used in software development.
- Mention **three unique features of each IDE**.

5. Version Control Alternatives

- Find **three alternatives to Git**.
- Explain **why Git is the most popular version control system** among developers.

6. Frontend Languages

- List **five frontend languages** used in web development.
- Mention one common use case for each (optional but encouraged).

7. Need for Frontend

- Write a short note explaining **why frontend is needed** in a web application.
- How does frontend impact user experience?

8. Importance of Testing

- Explain the importance of testing in software development **in your own words**.
- What problems can occur if testing is ignored?

9. Types of Testing

- Explain the difference between **Unit Testing** and **Functional Testing**.
- Give one simple example for each.

10. Version Control

- Explain the **importance of version control systems** (example: Git).
- How does version control help developers working in teams?

Submission Guidelines

- File format: **PDF or DOCX**
