

InClass Assignment 3

Event Binding & Interaction

Objective: Learn to handle user interactions by capturing DOM events (click) and modifying component state dynamically.

Part 1: Adding Interactivity State

Open `src/app/product-list/product-list.ts`. Add a new property to keep track of a "Cart Count":

```
cartCount: number = 0;
```

Inside the class, create a method to handle the increment logic:

```
addToCart() {  
  this.cartCount++;  
}
```

Part 2: Updating the Template with Event Triggers

Open `src/app/product-list/product-list.html`. Add a button to trigger the event and display the current cart status:

```
<div style="padding: 20px; border: 1px solid #ddd; margin-top: 15px;">  
  <h2>Available Items</h2>  
  <p>Items in Cart: <strong>{{ cartCount }}</strong></p>  
  
  <div style="border: 1px solid #eee; padding: 15px; border-radius: 5px;  
margin-top: 10px;">  
    <h3>{{ productName }}</h3>  
    <p>Price: ${{ productPrice }}</p>
```

```
<button (click)="addToCart()" style="background: #007bff; color: white;
padding: 8px 12px; border: none; cursor: pointer;">
  Add to Cart
</button>
</div>
</div>
```

Part 3: Submission

Submit the updated `product-list.ts` and `product-list.html`.
