

In Class assignment

Objective

The purpose of this assignment is to practice basic Python concepts including:

- Variables
- Numbers
- Arithmetic operations
- Strings
- String manipulation
- Boolean values
- Output using `print()`

Instructions

- Complete all tasks in **one Python file**.
- Add comments in your code explaining each task.
- Test your program before submitting.
- Submit **only the .py file** on the course portal.

Task 1: Working with Numbers

- # 1. Store your age in a variable called `my_age`
- # 2. Store your friend's age in a variable called `friend_age`
- # 3. Calculate the average age and print it (`age/2`)

Task 2: String Basics

- # 1. Store your first name and last name in two separate variables
- # 2. Combine them to form your full name and print it

3. Print the Entire Upper case converted version.

#4. Print the Entire lower case converted version

Task 3: Boolean Practice

1. Print if boolean conversion of 0 is True or False

2. Print if boolean conversion of "Hello" is True or False

3. Print if boolean conversion of [] is True or False

To be submitted before the class on July 20th 2026
